

SERVICES

## YOUR PARTNER FOR NFPA 70B AND ELECTRICAL PREVENTATIVE MAINTENANCE

In our constant quest to provide top-notch service for our customers, Shea Electric & Communications, LLC provides NFPA 70B services, also known as the National Fire Protection Association's Standard for Electrical Equipment Maintenance. NFPA 70B was a "recommended practice" for facility managers but is now an active standard for how facilities should address their electrical needs. Our employees are trained in the new regulations, bringing their expertise to any NFPA 70, NFPA 70E and NFPA 70B work they complete at your facility.

### **NFPA 70B (EPM) OVERVIEW**

NFPA 70B (EPM) is used in multiple settings, including industrial plants, commercial buildings and large residential complexes. The standard includes several sections including requirements for developing a safety program and guidance on establishing an electrical maintenance plan, assessing equipment condition and performing periodic maintenance procedures.

The guidelines also contribute to workplace safety. Electrical malfunctions can lead to incidents including fires, electric shocks, injuries and even fatalities. Providing regular inspections, testing and repairs ensures a company's equipment is operating within safe parameters. Inspections utilizing NFPA 70E and maintenance completed according to NFPA 70B guidelines also serve as important documentation to demonstrate proper care was taken to meet legal requirements.

Following electrical maintenance standards has an impact on operations. When a facility doesn't conduct maintenance promptly, it risks incidents, unplanned outages or equipment failures. Proper maintenance also extends the equipment's expected lifespan.
